## Cable Reel Transport Trailer

This simple style cable reel transport trailer is designed to carry reels of cable around your minesite behind a light duty pick-up truck. This unit is designed to back up around your reel of cable, lift the reel off the ground with hydraulic power, then have the reel secured into place for transport. The reel is locked in place off the ground with a pin system, while the rear gate of the trailer closes around the reel. This unit is also designed to allow the cable reel to free wheel as the driver of the trailer allows the cable to layout behind the moving unit.

This unit comes complete with a 12V DC electric/hydraulic power pack & 12V battery. Trailer will require 12V power supplied by the tow unit to charge the battery.

This unit as shown has a 58" wide opening and designed to accommodate reels up to 80" diameter.

The adjustable load spindle height ranges from 20" to 48" off the ground. For major height differences, the hydraulic cylinder can be relocated to accommodate the change from smaller reels to larger reels.

Pintle eye for pickup truck towing

Rear gate to enclose cable reel

Secure locking during transport

- Designed as a single axle unit with a maximum weight capacity of 7,000 lbs.
- Overall dimensions: 114" wide from outside of each wheel x 86" tall with a 78" reel loaded onto it
