

Universal Cable Stands

For over 25 years, Mine Cable Services Corporation (MCS) has manufactured its line of Universal Cable Stands to support and identify electrical cables in operations where draglines, shovels, drills, and other equipment are in use.

The MCS Universal Cable Stand is designed as a light weight, reflective marker to identify different runs of cable in operation. The octagonal shape provides a sturdy and rugged support for electrical cables or allows for the option of being placed over electrical cables already in position. Anchor Pins are also recommended to secure cable stands into position. (See next page)

Product Features and Benefits:

- Available in 20" and 30" tall models.
- Bottom slot feature provides option for placement over top of cable in position.
- Reflective striping provides high visibility.
- Convenient hand holes for easy handling.
- Available in standard colors of orange and yellow. Custom colors available by request.
- Steel Anchor Pins available in 12", 18", and 24" for securing the MCS Universal Cable Stand to the ground.
