

Citrus Based Electrical Cleaners

Mine Cable Services currently offers a variety of options for citrus based electrical cleaners used in high voltage cable repair applications. Available in either liquid bottles or single use cleaning wipes, citrus based electricals cleaners are required to clean conductor insulation material to remove residual semi-conductive material during a splice or phase repair procedure.

Bottles of citrus based electrical cleaners are recommended for use in high volume applications such as in a cable repair facility, while single use citrus based electrical cleaners are recommended for field applications. Single use wipes are available in either a single wipe format, or as a tandem pack which includes a citrus wipe with drying cloth. Mine Cable Services also offers convenient prepackaged Cable Preparation Kits. Each Cable Preparation Kit includes sandpaper and cleaning wipes required to properly prepare conductor insulation during cable repair operations.

Product Specifications and Ordering Information:

Part Number:
MCS-HP-35LF
1 Liter (32oz) bottle
with flip top

***NOT regulated for**
transport. Suitable
option for international
operations

Part Number:
MCS-PWHP-1
Single Citrus Based
Solvent Wipe

Packages of 10
or 50 each

Part Number:
MCS-PWHP-2
